## Qualified For water technology

### Qualified Water Technology Profile

Qualified is a Jordanian Iraqi enterprise sale, commercialise and providing Environmentally Friendly Technology for Domestic, for Industrial wastewater treatment and Seawater Processing. Qualified is not a one product company, instead we see ourselves as a solution provider, who is Able to take on all kinds of water purification challenges according to our clients request.

Our Rang is:

- Biological treatment system for communal waste water
- REVERS OSMOSIS system for Seawater and Brackish Desalination Unit
- Filtering and Softening Treatment Plant
- Chemically physically treatment plant for industrial waste water treatment  
DAF UNIT (DISSOLVED AIR FLOTATION).
- Drilling wells, determining the water quality and required depth.
- Design and installation of industrial water treatment units such as DAF and others.
- Studying alternative and appropriate low cost chemicals for all industrial water, sewage and drinking water units.
- Perform all chemical, physical and biological tests of all types of water.
- Conducting scientific studies and treating all water problems, and providing advice on how to treat them.
- Installing and operating all water treatment units for all types of water.

## Qualified For water technology

- Installation, maintenance and treatment of problems of boilers, chillers and cooling towers and providing technical and scientific advice for the use of the best chemical and biological materials

And more ...

*Projects in water, wastewater and environmental treatment are constructed and*

*Operated in Jordan and Middle East region:*

1) National Parliament (Almajles Alwatany) Project; Baghdad-Iraq:-

In this Project, we construct, manufacture and operate complete Automatic water treatment package (Reverse Osmosis system RO) unit for a capacity 1 m<sup>3</sup>/hour, which the product water of this unit meet with International standards and Regulations.

2) Households and Toiletries Manufacturing Company project; Irbid- Jordan:-

In this Project, we construct, manufacture and operate complete Automatic water treatment package unit (RO Unit and Deionizer Unit) to manufacturing of Households and Toiletries with a capacity 500 liter/hour, which is able to remove the total dissolved solids in the product water below 25 mg/liter. Also, we construct and operate Industrial wastewater package unit with a capacity of 3 m<sup>3</sup>/day for treat the Industrial wastewater which produce from the factory and the

product water of this unit meet with International standards and Regulations.

3) Middle East Pharmaceuticals Company Project; Amman-Jordan:-

In this Project, we construct, manufacture and operate water treatment package unit for treat, disinfect and remove the Nitrate from the water to used in manufacturing of Pharmaceuticals with a capacity 500 liter/hour and the product water of this unit meet with International standards and Regulations.

4) Palestine Plastic Industries Company LTD (Iadae'n) Project; ToolKarem- Palestine:-

In this Project, we construct, manufacture and operate water treatment package unit(RO Unit) to manufacturing of Drinkable water which applicable to produce water bottles with a capacity 7500 liter/hour. Also, this Automatic unit applicable to produce Beverages or Aerated water and the product water of this unit meet with International standards and Regulations.

5) Rahalleh Company Project; Baghdad-Iraq:-

# المؤهلون لتكنولوجيا المياه Qualified For water technology

In this Project, we construct, manufacture and operate water treatment package unit (RO Unit) to manufacturing of Drinkable water in Iraq, which applicable to produce water bottles with a capacity 7500 liter/hour. Also, we construct and operate Industrial wastewater package unit with a capacity of 25 m<sup>3</sup>/day for treat the Industrial wastewater which produce from the factory (Washing machine outlet, Cleaning water and wastewater) to prevent Environmental pollution and produce Recycling water for Agriculture and Irrigation uses. The product water of this unit meets with International standards and Regulations.

## 6) Jordan Tourism Company Project (for 300 m<sup>3</sup>/day); Aqaba-Jordan:-

In this Project, up to now days, we construct and will be operate in the near future treatment wastewater package unit with a capacity of 300 m<sup>3</sup>/day for treat the wastewater which produce from the Talaby Tourism Complex to prevent Environmental pollution and produce Recycling water for Agriculture and Irrigation uses . Environmental impact assessment for this project done. The product water of this

unit meets with International standards and Regulations. The good advantage of this unit is prevent of producing odor from it In the future will be expand this unit up to 1000 m<sup>3</sup>/day.

7) International Tobacco & Squarest Company Project (for 50 m<sup>3</sup>/day); Amman-Jordan:-

In this Project, up to now days, we construct and will be operate in the near future Industrial wastewater package unit with a capacity of 50 m<sup>3</sup>/day for treat the Industrial wastewater which produce from the factory. This to prevent environmental pollution and produce Recycling water for Agriculture and Irrigation uses. The good advantage of this unit is preventing of producing odor and the product water of this unit meet with International standards and Regulations. Environmental impact assessment for this project done.

8) Hatta water bottling Project; Jordan-Amman

In this Project, we construct, manufacture and operate water treatment package unit to manufacturing of Drinkable water which applicable to produce water bottles with a capacity 15000 liter/hour. Also, this Automatic unit applicable to produce Beverages or

Aerated water and the product water of this unit meet with

International Standards and Regulations.

9) Crown Middle East Can Co. LTD Project ;Jordan-  
Amman & Dubai UAE

In this Project, we construct, manufacture and operate water

treatment package unit to manufacturing of Industrial RO system

two units one from Brackish water And the other from sea water.

Also the project of Industrial waste water treatment unit using DAF

unit and the product water of this unit meet with International

Standards and Regulations and finally the deionizer unit for the

industrial water.

10) JORDACH CO. IRBID

In this Project, we construct, manufacture and operate water

treatment package unit to manufacturing of Industrial RO

system. Also the project of Industrial waste water treatment

unit using DAF unit with capacity 50 m<sup>3</sup>/hr. and the product

water of this unit meet with International Standards and
